AMERICAS AUTOMATION

Shuttles, specifically Pallet Runner, have been used to design high-density, deep-lane storage systems in North America for over 20 years. Over the 20-plus years that shuttles have been available in the North American market, manufacturers have come and gone, but all had one common trait: they were produced overseas.

In the spring of 2024, Automha Americas took another big step in providing unprecedented service to our clients by opening our North American assembly area, a first in the shuttle arena. Automha Americas is proud to be the first shuttle manufacturer to make a long-term commitment to the North American market by assembling in the USA. The investment Automha Americas has made brings significant benefits to our clients, including pallet/load testing before assembly, clients' ability to oversee the production of their shuttles, completed shuttle testing with clients' own loads before shipment and shorter lead times.

The opening of our assembly area is just yet another example of the investment and commitment Automha Americas continues to show to the Americas marketplace.

Thank you,

**Steve Dale**  
Vice President
